**WEB BASED REMOTE CONTROL FEATURE NOW AVAILABLE AT NO CHARGE
ON POPULAR ENVIRONMENTAL TEST CHAMBER CONTROLLER/LOGGERS**

Tidal Engineering's WebTouch Remote™ feature provides convenient remote control thru the network and is now available at no charge on new and installed Synergy Controller systems

Randolph, NJ, Tuesday April 2, 2013...Tidal Engineering, a leader in the design and manufacture of embedded hardware and software for environmental test control and data acquisition systems, today announced an offer to provide the WebTouch Remote (tm) feature at no charge to new and existing customers of Synergy Controller/Data Loggers.

With WebTouch Remote(tm) operators and engineers have full access to their test chamber's Synergy Controller touch screen using any web browser; the interface in the web browser is identical to the local touch screen. This powerful feature is useful for offsite monitoring and for saving time in the lab.

"We promise our customers that their investment in our products will pay dividends because our standardized interfaces protect against obsolescence and because we are constantly listening and developing new features and capabilities that add value. This offer is an example of Tidal delivering on that promise" said Tidal Engineering President Craig Borax. "When we introduced WebTouch Remote™ it was an optional added-value feature but today engineers and technicians expect this capability."

Synergy Controller users can fill out a form online to register for this promotion. No additional hardware is required; the feature is available on all new and fielded systems.

Tidal's award-winning Synergy Series of hardware and software are expressly engineered to enhance the performance of a broad range of test chambers. Exhibiting unparalleled integration and connectivity, the instruments are designed to retrofit easily into virtually all environmental test chambers and process oven including those manufactured by Tenney, BlueM, ESPEC, Thermotron, Envirotronics, Qualmark, and CSZ. The Synergy Controllers supporting the WebTouch

Remote™ feature include the current generation Synergy Nano and Synergy Micro 2 as well as previous generation Synergy Micro , Synergy Compact, Synergy V, and VersaTenn V controllers.

To learn more about this WebTouch Remote ™ offer and the Synergy Controller family, visit www.tidaleng.com/webtouch_offer.htm or contact Craig Borax at Tidal Engineering via either phone (973/328-1173) or e-mail (craig.borax@tidaleng.com).
